Management Company

Friendly Smart Home Management Platform
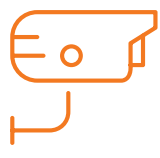

Launching Your Smart Home Service

Friendly's Smart Home is a full Smart Home solution designed for the management and monitoring of household automation. It enables service providers to introduce their own Smart Home automation service in the shortest time possible, offering various service packages. The solution is device-agnostic and doesn't generate hardware dependency.

Our unique Smart Layer™ technology enables streamlined provisioning and management of multiple HW brands on a unified platform, eliminating the need for costly development and integration efforts when adding new device types. This feature dramatically reduces time-to-market, enabling Smart Home providers to start offering services faster, gain a competitive edge, and capture market share. Furthermore, the Smart Layer™ technology significantly reduces operational costs and increases ARPU.
